

9. Credenciales y loot

Buscar, convertir, crackear y reutilizar sin caos.

Fuente	Que mirar
Web root	.env, config.php, wp-config.php, web.config, appsettings.json.
Homes	.ssh, history, Desktop, Downloads, backups, notas.
Shares	Backups, IT, Dev, Deploy, SYSVOL, NETLOGON, scripts.
Windows	cmdkey, Unattend.xml, PowerShell history, IIS configs.
Linux	/var/www, /opt, /var/backups, cron scripts, bash history.

Conversiones frecuentes

```
ssh2john id_rsa > id_rsa.hash
keepass2john vault.kdbx > keepass.hash
zip2john secret.zip > zip.hash
office2john doc.docx > office.hash
john --wordlist=/usr/share/wordlists/rockyou.txt hash.txt
john --show hash.txt
hashcat -m 1000 ntlm.hash /usr/share/wordlists/rockyou.txt
```

- Etiqueta cada credencial por fuente y servicio probado.
- Despues de cada credencial valida, reenumera: shares, sudo, WinRM, DB, panel web, LDAP.
- En AD evita spraying agresivo; usa usuarios reales y una password candidata con control.
